

Django Templates Lab

Dynamic Multi-Page UI - Screenshots and Simple Explanation

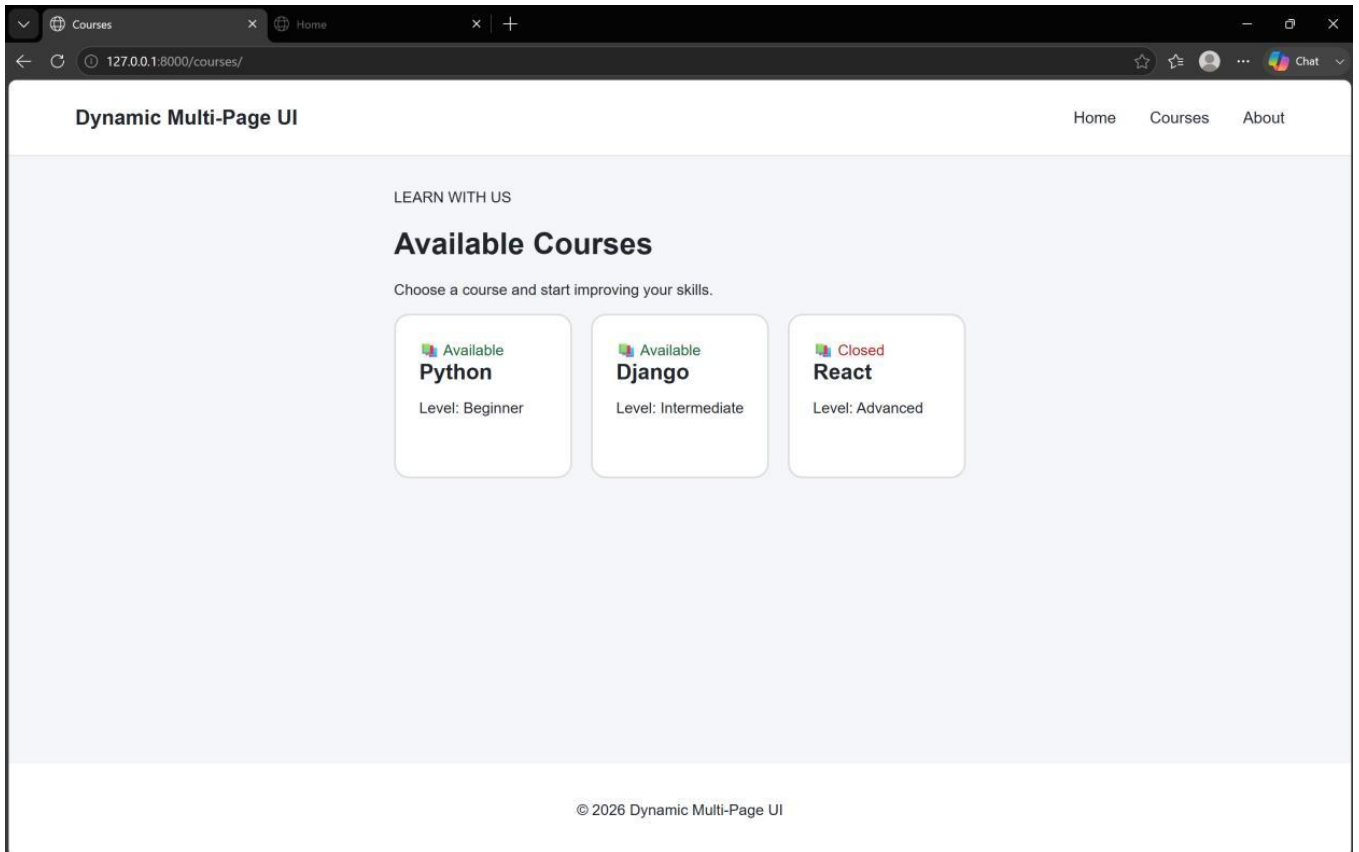

This document presents the three completed pages of the Django lab: Home, Courses, and About.

1. Home Page

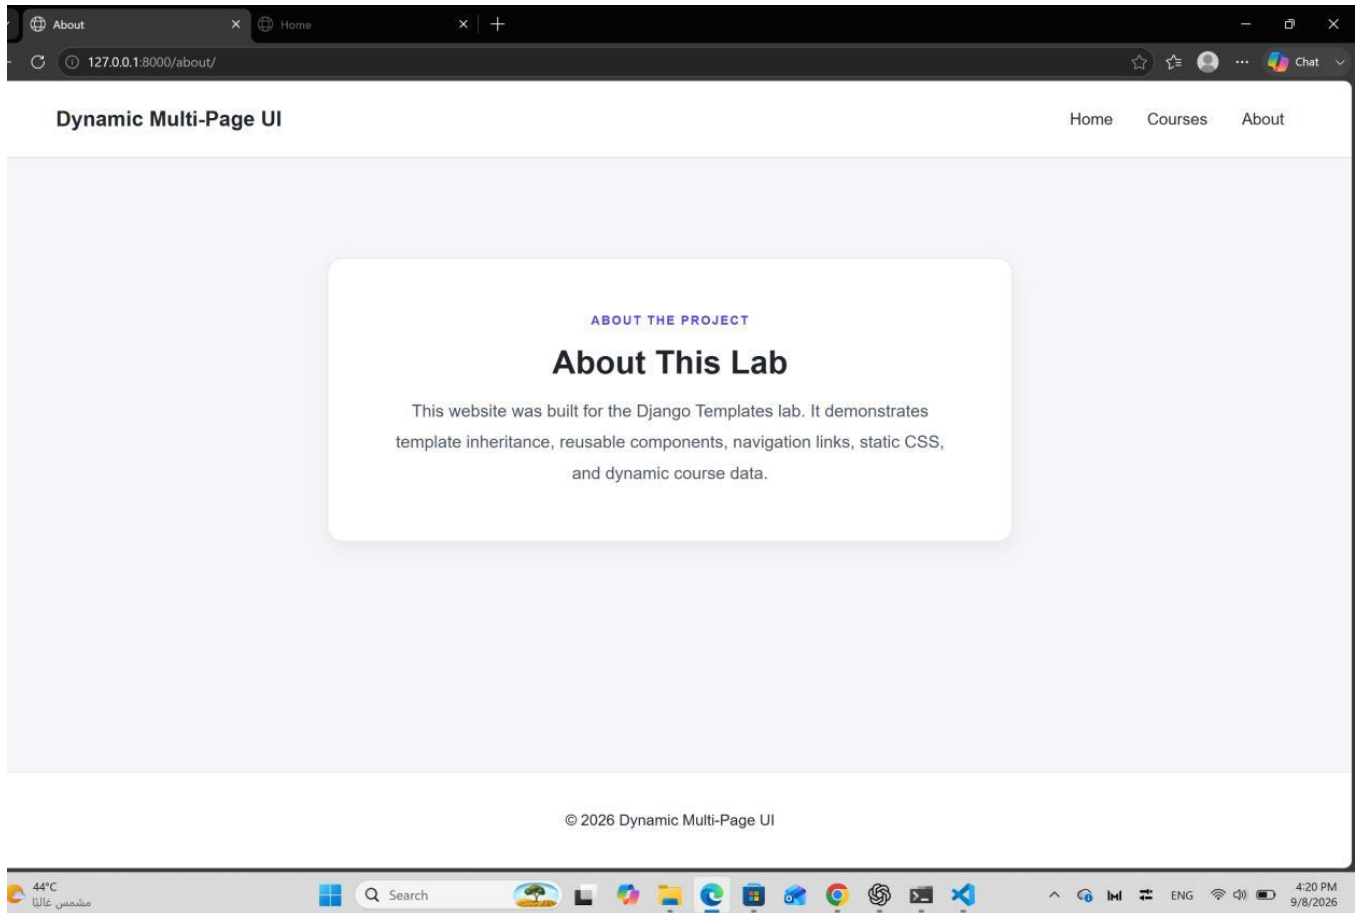

This page shows the reusable layout created with **base.html**. The navigation bar and footer are shared across all pages. The page also uses static CSS and displays course items as styled cards.

2. Courses Page

This page receives course data from **views.py**. A **for** loop creates a card for every course, and an **if** condition shows whether the course is Available or Closed.

3. About Page

This page extends the same base template and explains the purpose of the lab. It demonstrates template inheritance, reusable components, navigation links, static CSS, and dynamic course data.
