

Week 7 Day 1 Challenge

Print the request method

The image shows a VS Code editor window with a file named `views.py` open. The file contains three Django view functions: `home`, `about`, and `contact`. The `home` function is currently selected, and its code is as follows:

```
1 from django.shortcuts import render
2
3 def home(request):
4     print(request.method)
5     return render(request, 'home.html')
6
7 def about(request):
8     return render(request, 'about.html')
9
10 def contact(request):
11     return render(request, 'contact.html')
```

Below the editor, the Terminal panel is active, showing the command prompt and the output of running `python manage.py runserver`. The output indicates that the system checks passed, migrations are applied, and the Django development server is running on `http://127.0.0.1:8000/`. A GET request is received, and the response is `200 279`.

Performing system checks...

System check identified no issues (0 silenced).

You have 18 unapplied migration(s). Your project may not work properly until you apply the migrations for app(s): admin, auth, contenttypes, sessions.
Run 'python manage.py migrate' to apply them.
September 06, 2026 - 18:48:20
Django version 6.1.1, using settings 'routing.settings'
Starting WSGI development server at http://127.0.0.1:8000/
Quit the server with CTRL-BREAK.

WARNING: This is a development server. Do not use it in a production setting. Use a production WSGI or ASGI server instead.
For more information on production servers see: https://docs.djangoproject.com/en/6.1/howto/deployment/
